PROFESSIONAL SUMMARY

Computer Science and Engineering graduate with 1+ year of experience in software engineering, data analytics, and technical operations. Proficient in building, maintaining, and optimizing software solutions using Python, SQL, and BI tools. Demonstrated ability to troubleshoot complex data systems, implement continuous improvements, and deliver actionable insights autonomously. Known for proactively anticipating client and stakeholder needs, sharing technical knowledge with team members, and driving operational efficiency across cross-functional environments.

WORK EXPERIENCE

GyanX – EdTech Platform | Software Engineering Technician (Web & AI) | Mar 2026 – Jun 2026

- Contributed to the development, maintenance, and optimization of a child-centric educational web platform, applying software engineering best practices throughout the SDLC.
- Integrated AI-driven adaptive learning features, performing testing and measuring of model outputs to ensure reliability and educational accuracy.
- Implemented multilingual functionality, independently troubleshooting and resolving cross-browser and localization issues to ensure seamless user access.
- Collaborated with cross-functional teams to build secure application features, incorporating safeguards against unauthorized access — proactively anticipating and acting upon client security needs.
- Shared technical knowledge with team members, supporting peers in applying best practices for secure and scalable development.

Amazon | Analyst – Risk & Software Operations | Oct 2024 – Dec 2025

- Developed and maintained automated reporting solutions and dashboards, optimizing software workflows to reduce manual operational effort and improve decision-making speed.
- Analysed customer behaviour and flagged suspicious activity trends across global markets by monitoring network and behavioural data patterns — proactively identifying risks before escalation.
- Troubleshoot and adjusted fraud detection workflows to reduce false positives, improving investigation efficiency and system accuracy.
- Collaborated with stakeholders across teams to minimise customer risk, demonstrating strong teamwork and autonomous initiative in high-volume environments.
- Continuously improved analytical processes and reporting pipelines, applying critical thinking to identify gaps and implement preventive actions.

Indian Oil Corporation Ltd. | Machine Learning Intern | Aug 2023 – Sep 2023

- Built and tested a YOLOv8-based license plate recognition system; performed iterative troubleshooting and model evaluation to reduce manual identification errors by 40%.

- Analysed operational data patterns to optimize workflows, reducing manual intervention by 30% through data-driven process adjustment.
- Applied preprocessing and testing techniques to improve system reliability, ensuring production-level performance standards.

KEY PROJECTS

Customer Behaviour Tracking (Kibana)

- Monitored fraud trends and digital behavioural signals; developed technical solutions for real-time anomaly detection and trend analysis.
- Continuously improved detection accuracy by 20% through iterative analysis and process refinement.

E-Commerce Platform – Taju Tea

- Designed, developed, and optimized a full-stack web application; independently managed product, order, and user modules end-to-end.

Face Recognition Attendance System

- Built a real-time Python/OpenCV system; performed testing and calibration to improve process reliability and reduce manual errors.

Hotel Management System

- Developed and maintained a PHP/MySQL application for booking and customer tracking; optimized database queries for performance.

EDUCATION

B.Tech – Computer Science and Engineering | Dhemaji Engineering College, Assam Science & Technology University | 2020–2024 | CGPA: 8.10

TECHNICAL SKILLS

Engineering & Development	Python (Pandas, NumPy, Matplotlib), SQL, PHP, JavaScript, HTML/CSS, MySQL
Software Testing & QA	Model evaluation, system testing, troubleshooting, debugging, performance benchmarking
BI & Analytics Tools	Power BI, Tableau, Kibana, Excel (Pivot Tables, VLOOKUP), Dashboard Creation
Core Competencies	Software maintenance & optimization, continuous improvement, technical troubleshooting
Collaboration & Communication	Cross-functional teamwork, stakeholder reporting, knowledge sharing, client needs analysis

CERTIFICATIONS

Power BI (Udemy) • Data Analytics (Coursera) • Machine Learning (Coursera) • Advanced MS Excel (Udemy) • Web Development (Udemy)
